

Ray Qin

Senior Software Engineer | Full-Stack & Backend | AI Engineering | Agentic Systems

+1 415-604-6032 | qinjianxyz@gmail.com | linkedin.com/in/qinjianxyz

SUMMARY

Senior Software Engineer at ZipRecruiter, promoted from new graduate to Senior in 22 months. Three years building full-stack product and AI-engineering systems spanning authentication, onboarding, growth conversion, search/recommendation, and agentic workflows. UC San Diego dual B.S. in Mathematics-Computer Science and Mechanical Engineering; Cum Laude, GPA 3.9/4.0.

EXPERIENCE

ZipRecruiter | Senior Software Engineer (promoted Feb 2025) | Apr 2023 - Apr 2026

- Owned core jobseeker systems across authentication, onboarding, growth conversion, and search/recommendation after joining as a new graduate.
- Rebuilt 30+ fragmented registration, login, and onboarding entry points into one reusable, observable platform, delivering a double-digit login-rate lift, 10K+ weekly SMS opt-ins, and ~40% faster homepage loads.
- Architected the backend (Go services, OTP login, auto-login tokens, Protobuf credential interfaces) and the shared React / Next.js / Tailwind frontend; sequenced the migration that retired three legacy auth, password-generation, and login services.
- Drove cross-team execution: broke the migration into six open design docs and reviewable milestones, and aligned messaging, mobile, SEO, paid acquisition, martech, and identity teams while unblocking engineers through design reviews and office hours.
- Pioneered AI-assisted delivery on production work: ran Claude Code loops that turned product designs into reviewed PRs, demos, and artifacts; connected Jira, Slack, Notion, and GitHub to agents via MCP; hosted ZipRecruiter's first Cursor workshop and helped define company AI-usage guidelines.
- Built vector-embedding similarity search for Suggested Jobs and More Candidates Like This, and designed gRPC / Connect / Protobuf service APIs; delivered company-wide talks on API design and secure engineering.

Eightfold | Software Engineer Intern | Jun 2022 - Oct 2022

- Redesigned ETL loading to be atomic, cutting data inconsistency below 2%, and extended consistency monitoring to 56 tables across RDS, Redshift, and Firehose.
- Built a React / Flask Spark-debugging console over EMR / S3 data that cut Spark job debugging time ~40%, with tests, logging, mock endpoints, and monitoring alerts.

Earlier Software Experience | Software engineering internships | 2020 - 2022

- MEDsmart: Cut clinic operating cost ~11% and inventory waste ~4% by automating medication-refill and inventory forecasting (AWS data pipelines, Python/LSTM models, dashboards), and shortened shortage response time.
- Qualcomm Institute (UCSD Calit2): Integrated Yelp API and city open data to build business profiles and responsive HTML / CSS / Bootstrap / JavaScript visualization sites.

SELECTED PROJECTS

- Enterprise OS: Built an agentic engineering system where Codex and Claude Code deliver against real codebases in isolated worktrees, with task packets, shared memory, evaluations, permissions, and CI so every AI change is reviewable, testable, and reproducible.
- Anvil Sim (anvil-sim.vercel.app): Built an AI-first engineering simulation product for STEP/STP geometry and .anvilproj bundles, spanning structural FEA, CFD, heat transfer, and electronics-thermal with field visualization, QoIs, and reviewer packets.
- Engineering practice: Applies spec-driven development, TDD, CI gates, evaluation evidence, and rollback-aware review loops to keep AI-assisted work testable and accountable.
- Earlier engineering: Built SQLightning, a C++ relational-database CLI (SQL parsing, primary-key indexing, LRU caching, unit/integration tests, CI/CD), and a 1/8-scale autonomous vehicle (Jetson Nano, TensorFlow/Donkey Car, OpenCV, ROS2, YOLOv5).

EDUCATION & SKILLS

University of California, San Diego | B.S. Mathematics-Computer Science; B.S. Mechanical Engineering | Cum Laude, GPA 3.9/4.0

Programming: TypeScript/JavaScript, Go, Rust, Python, SQL, C/C++, Bash, Protobuf, HCL. **Web/API:** React, Next.js, React Native, Tailwind, Node.js, gRPC, Connect, OpenTelemetry. **AI/Infra:** Claude Code, Codex, MCP, RAG, vector search, LLM evals, context engineering, Kubernetes, Docker, Terraform, Postgres, Redis, Kafka, Qdrant.

Focused domains: full-stack software engineering, AI engineering, agentic systems, authentication/security, search/recommendation, observability, engineering simulation. **Languages:** English near-native professional fluency; Mandarin Chinese native.
