

Ray Qin

Senior Software & AI Engineer • Production LLM & Autonomous Agents • B.S. Math–CS & Mechanical Eng.
• Ex-ZipRecruiter (10M+ users)

San Francisco Bay Area • +1 415-604-6032 • qinjianxyz@gmail.com • linkedin.com/in/qinjianxyz • qinjianxyz.github.io

SUMMARY

Senior software & AI engineer who went from **new graduate to Senior in 22 months** and now ships **production AI** — autonomous agents, RAG, and grounded LLM systems — and the full-stack products around them. A dual B.S. in **Mathematics–Computer Science and Mechanical Engineering** (UC San Diego) is the engine behind both: rebuilt authentication for **10M+ monthly users** at ZipRecruiter (double-digit login-conversion lift, ~40% faster homepage), and solo-built **Anvil Sim** — a simulation product spanning FEA, CFD, and thermal, from geometry kernel to UI.

EXPERIENCE

ZipRecruiter

Apr 2023 – Apr 2026

Senior Software Engineer • new grad to Senior in 22 months • Santa Monica / Remote

- Rebuilt registration, login, and authentication across **30+ fragmented entry points** into one reusable platform for 10M+ monthly users — a **double-digit login-conversion lift**, 10K+ weekly SMS opt-ins, and ~40% faster homepage loads.
- Architected the backend (Go services, OTP login, auto-login tokens, Protobuf credential APIs) and shared React / Next.js frontend; sequenced the migration that retired three legacy auth, password-generation, and login services.
- Pioneered **AI-assisted delivery**: ran Claude Code loops that turned designs into reviewed PRs; wired Jira, Slack, Notion, and GitHub to agents via MCP; ran the company's first Cursor workshop and shaped the company's AI-usage guidelines.
- Shipped **vector-embedding similarity search** powering Suggested Jobs and More Candidates Like This; drove cross-team execution across messaging, mobile, SEO, paid acquisition, and identity; delivered company-wide talks on API design and secure engineering.

SELECTED PROJECTS

Anvil Sim — AI-first engineering simulation product

Swift/SwiftUI + Metal, Rust, OCCT • anvil-sim.vercel.app

- Built solo: import STEP/STP geometry, agent-assisted setup, a validated solve, and reviewer packets across structural FEA, CFD, and thermal — a native Mac app from geometry kernel to UI.

Enterprise OS — multi-agent engineering system

Rust, agent orchestration, RAG

- Codex and Claude Code deliver against real codebases in isolated worktrees; every change carries specs, tests, evaluations, permissions, and CI — reviewable, reproducible, and rollback-aware.

EARLIER EXPERIENCE

- **Eightfold** — SWE Intern (2022): made ETL loading atomic, cutting data inconsistency below 2%; extended consistency monitoring to 56 tables (RDS/Redshift/Firehose); built a React/Flask Spark console that cut debug time ~40%.
- **MEDsmart** — SWE Intern (2021–22): cut clinic operating cost ~11% and inventory waste ~4% with AWS data pipelines and Python/LSTM forecasting.
- **Qualcomm Institute (UCSD Calit2)** — SWE Intern (2020–21): built business-data visualizations from the Yelp API and city open data.

EDUCATION

University of California, San Diego

2019 – 2023

Dual B.S. — **Mathematics–Computer Science & Mechanical Engineering** • Cum Laude, GPA 3.9/4.0

SKILLS

Languages TypeScript / JavaScript, Go, Python, Rust, SQL, C / C++

AI AI agents, MCP, RAG, LLM evals, vector search, context engineering; Claude Code, Codex, Cursor

Web & API React, Next.js, React Native, Node.js, gRPC / Connect / Protobuf, REST, auth / OTP, SEO

Infra & Data Postgres, Redis, Kafka, Docker, Kubernetes, Terraform, Spark, observability, TDD
