Experience

ZipRecruiter

Senior Software Engineer · Apr 2023 to Apr 2026 · Remote

- Rebuilt registration, login, and authentication across 30+ entry points for 25M+ monthly job seekers, increasing login conversion by double digits, adding 10K+ weekly SMS opt-ins, and cutting homepage load time about 40%.
- Designed and owned the shared authentication platform: React/Next.js frontend, Go/gRPC/Protobuf services, OTP, and automatic login. Led adoption across identity, messaging, mobile, SEO, and acquisition, retiring three legacy services.
- Shipped vector similarity search powering Suggested Jobs and More Candidates Like This using hybrid retrieval, graph traversal, and filtering across a marketplace of 25M+ job seekers and 3.3M employers.
- Built agentic engineering workflows that took product designs through implementation, testing, review, and demos; connected live context from Jira, Slack, Notion, and GitHub through MCP, wrote AI usage guidelines, and taught ZipRecruiter's first Cursor workshop.

Eightfold

Software Engineer Intern · Jun 2022 to Oct 2022

- Made ETL loads atomic, reducing data inconsistency below 2% and extending monitoring across 56 RDS, Redshift, and Firehose tables.
- Built a React/Flask console over EMR and S3 that cut Spark job debugging time about 40%; added tests, structured logging, event tracking, and alerts.

MEDsmart

Software Engineer Intern · 2021 to 2022

- Built AWS data pipelines and Python/LSTM forecasting that reduced clinic operating costs by about 11% and inventory waste by about 4%.

Selected Projects

Anvil Sim

Agentic Engineering Simulation

- Built a native SwiftUI engineering simulation app that takes CAD geometry through FEA, CFD, and thermal screening, preserves solver evidence for review, and compares results with CalculiX.

Autonomous Vehicle

Perception and Controls · UC San Diego

- Built perception and control for a 1:8-scale autonomous car using Jetson Nano, ROS2, YOLOv5, and OpenCV; achieved 95%+ perception accuracy and 90%+ autonomous track completion.

Education

University of California, San Diego

Dual B.S. in Mathematics–Computer Science and Mechanical Engineering · Cum Laude · GPA 3.9/4.0 · 2019 to 2023

Skills

Engineering: Full-stack product engineering, system design, distributed systems, API design, authentication and web security, data analytics

Languages: TypeScript/JavaScript, Go, Python, Swift, Rust, Java, SQL, C/C++, Bash

Web and mobile: React, Next.js, React Native, SwiftUI, Node.js, Tailwind CSS, REST, gRPC, Connect, Protobuf

AI and data: LLM agents, RAG, retrieval and reranking, function calling, structured outputs, LLM evaluation, vector search, Spark

Cloud and infrastructure: AWS, Postgres, Redis, Kafka, Docker, Kubernetes, Terraform, OpenTelemetry
